

Pump Discharge Assemblies

Technical Specifications

- Pipe and PVC fittings are Schedule 40 PVC pressure, solvent welded, threaded, and sealed with PTFE pipe thread sealant
- 1/2" models are made with PEX quick disconnect fittings with a working pressure of 250 psi at 73° F and flexible PEX pipe with a working pressure of 160 psi at 73° F
- Designed to facilitate routine maintenance
- Union allows for easy pump removal
- Ball valve included for manual cut-off
- Ball check valve provided to prevent backflow

STEPROS pump discharge assemblies include all the necessary plumbing components to convey effluent from a pump to the collection system. They are designed with the maintaining utility in mind to minimize maintenance time and maximize functionality of the vault and pump. Pictured below is the assembly specifically designed for STEPROS' self-cleaning vault. Custom discharge assemblies are available upon request.
